

## Proven Performance

After 10 years of successfully lining rigid frame haul trucks for a North Carolina granite producer, GRT Rubber transitioned with the operation and installed Rubber Truck Bed Liners in their first two articulating frame CAT 745s in spring 2022.

Each truck was lined with 4" thick floor and head wall liners and 3" thick side wall liners. Installation took approximately 5.5 hours per truck using two mechanics and a lift operator. To date, the trucks have logged 9,950 and 9,940 hours of operation.

With an average of 30 loads per day, the trucks have hauled approximately 1,343,250 tons each. In September 2024, an inspection found zero damage and no measurable wear. A drill test conducted in May

2025 showed the floor liners measured consistently at 3-7/8" and the side liners at 2-7/8".

**The liners are projected to last for the full service-life of the trucks, exceeding 25,000 hours and 5 million tons or more.** The customer has acquired two more CAT 745 trucks and is continuing their valued partnership with GRT Rubber.

In addition to the proven performance of the Rubber Truck Bed Liners, additional benefits include improved safety, easy installation and abrasion resistance. Through independent testing, the liners have been shown to reduce in-cab noise by 20 dB, while also reducing metal fatigue and stress fractures.
